1. Befor the endurance in cycles test, the cell shall be discharged at 56mA to a final voltage of 1.0V/cell.
2. The following endurance test shall then be carried out, in an ambient temperature of $20^{\circ}\text{C} \pm 5^{\circ}\text{C}$.

5.3 Humidity

The battery shall not leak during the 14 days which it is submitted to the condition of a temperature of $33 \pm 3^{\circ}\text{C}$ and a relative humidity of $80 \pm 5\%$.

6. OTHERS

6.1 We recommend you to set the cut-off voltage at 1.0V/cell.

6.2 If the cut-off voltage is above 1.1V/cell, the battery may be underutilized resulting insufficient use of the available capacity.

6.3 If it is below 1.0V/cell, the battery may have discharge or reverse charge to the cell.

7. PRECAUTION

The cells shall be delivered in charged condition. Before testing or using, the cell shall be discharged at $20 \pm 5^{\circ}\text{C}$ at a constant current of 56mA to a final voltage of 1.0V/cell.

7.1 Avoid throwing cells into a fire or attempting to disassemble them.

7.2 Avoid short circuiting the cells.

7.3 Avoid direct solidarity to cells.

7.4 Observe correct polarity when connecting.

7.5 Do not charge with more than our specified current.

7.6 Use cells only within the specified working temperature range.

7.7 Store cells in dry and cool place.
